Aging Kittens

A kitten’s permanent incisors (the 12 teeth in the front of the mouth – 6 on top, 6 on bottom) usually come in at a predictable rate. The following pictures can be used as a guideline for determining the age of kittens between 12 and 24 weeks of age.

Healthy kittens weigh about 1 pound for every month of age. So, a 2 pound kitten is about 2 months old!

- **<12 weeks**
- **12 weeks**
- **14 weeks**
- **16 weeks**
- **20 weeks**
- **Adult**

**Developmental Milestones**

- **2 weeks**
  - Eyes open
- **3 weeks**
  - Crawling
  - Baby teeth erupt
- **4 weeks**
  - Walking
  - Playing
